

multiprocessing.Queue()

НЕ ЧЕПЕЗ MANAGER!

```
def worker(queue: mp.Queue):
    print(f"Запущен Worker. PID: {os.getpid()}")

    while True:
        item = queue.get()
        print(f"Получено сообщение: {item}")

        time.sleep(5 + random())

        print(f"Отработал {item}")

def tasks_gen(queue: mp.Queue, n: int):
    for i in range(n):
        queue.put(i)

def main():
    work_queue = mp.Queue()

    tasks_gen(work_queue, 10)

    print(f"PID главного процесса: {os.getpid()}")

    mp.Process(target=worker, args=(work_queue,)).start()
    mp.Process(target=worker, args=(work_queue,)).start()

    tasks_gen(work_queue, 10)

if __name__ == '__main__':
    main()
```
